Hi,

I just wanted to give you our comments on the presentation on mitigation that the LWG gave last week. Sorry neither Ben or I were able to be there.

- 1) Their estimates for costs of mitigation in the Harbor are high based on what I have seen for restoration costs on the NRDA side.
- 2) MNR may require mitigation if there is a continued exposure of ESA-listed species to contaminants going forward due to EPA's decision.
- 3) It is very unlikely we would approve mitigation outside the Harbor since that is where the harm will be occurring.
- 4) And again, we will use the values we developed to assess mitigation needs, not the LWGs "functional habitat values."

Genevieve

Hi Ben,

We understand you will be on the phone during the LWG FS check-in meeting on Wednesday and wanted to provide you with the mitigation cost presentation that we will be going over during that meeting in case you have not seen a copy of it yet.

Mike Schiewe and Valerie Oster will be in person at the meeting and I will be on the phone.

Let us know if you have any questions about the presentation.

Thanks,

Elizabeth

Elizabeth Appy
